Learning Goals and Outcomes

GOAL 1: Analyze organizational data, information, and knowledge requirements for the design and implementation of information systems

SLO 1.1: Design a database from the analysis of information requirements
SLO 1.2: Build and process a relational database using a common DBMS software package.
SLO 1.3: Explain the functions of database administration.
SLO 1.4: Model and document information system requirements.

GOAL 2: Articulate business implications of enterprise information systems infrastructure and architecture in a global environment.

SLO 2.1: Describe standard information technology architectures and key protocols.
SLO 2.2: Explain technology standards for local area networks and wide area networks.
SLO 2.3: Analyze global impacts on infrastructure and architecture.

GOAL 3: Align information strategy with organizational strategy.

SLO 3.1: Describe frameworks for strategic alignment of IT and corporate goals.
SLO 3.2: Explain how IT investments support an organization’s competitive strategy.
SLO 3.3: Explain IT procurement strategy.

GOAL 4: Explain threats, challenges, opportunities and trends of information systems in the global environment and develop adequate solutions.

SLO 4.1: Discuss security issues of networking infrastructure.
SLO 4.2: Analyze information assurance needs.
SLO 4.3: Analyze emerging information technology trends and how they can affect the organization.
SLO 4.4: Explain IT auditing.
